

Energy Management Policy

Within the framework of this Policy, Tüpraş is committed to:

- Achieve carbon neutrality by 2050,
- Adopt the goal of being a leading company admired for its performance on a global scale, respectful of environmental and life values, in all its facilities, to obtain high-quality and low-cost products in accordance with European Union standards and in compliance with environmental and human health laws,
- Realize and increase investments in renewable and clean energy,
- Use natural resources in the most efficient way by protecting them,
- Implement energy efficiency and saving measures to minimize resource loss with the goal of carbon neutrality,
- Continuously improve by following new technologies aimed at increasing energy efficiency,
- Monitor and continuously develop energy efficiency performance with digital technologies,
- Develop and implement new energy projects in line with Tüpraş's climate change and sustainability goals,
- Integrate applicable standards, especially ISO 50001 Energy Management System, into processes,
- Work in compliance with local and international legislation regarding energy management,
- Consider energy efficiency in purchased products and services, new investments and designs, production, and all processes,
- Carry out innovation or research and development investment processes to reduce energy consumption,
- Evaluate and consider risks and opportunities related to climate change and sustainability from an energy management perspective,
- Contribute to the development of employees by conducting training and internal communication activities to raise awareness about reducing energy consumption,
- Conduct energy audits to identify opportunities for improving energy performance,
- Make this Policy accessible to all stakeholders and ensure its understanding and implementation throughout the entire value chain.
